

GO-TO-MARKET STRATEGY

ESAF Market Launch

Closing the gap between a strong framework
and a sales strategy buyers immediately understand.

PREPARED FOR

CLASSIFICATION

Confidential

A direct read on where things stand.

After reviewing all of the ESAF materials you shared, I want to give you my honest read on where things stand and exactly how I believe we should move forward.

The framework you have built is genuinely strong. The problem it solves is real, the regulatory moment is right, and the IP structure is smart.

What I see right now is a gap between having a great product and having a sales strategy that puts it in front of buyers in a way they immediately understand.

That is the gap this proposal is designed to close.

This document outlines how I see the ESAF opportunity, who the right buyers are, how to approach them, and how I would support you in making it happen. My goal is for you to walk away from this with a clear picture of the path forward — and confidence that there is one.

SECTION 01

What ESAF is — and where it sits in the market

Other groups are moving into emotional AI safety. Most are approaching it from modeling, UX, or ethics. ESAF is in a different lane: **governance and liability at the system level.**

The market shift is straightforward. Companies can no longer rely on "the AI did it" as a defense. If their system influences human behavior — decisions, emotions, actions — they own the outcome. ESAF sits in that gap.

The closest parallel is PCI-DSS — the compliance standard every company must follow to handle credit card data. PCI-DSS is not software. Organizations adopt it, embed it into their processes, and depend on it ongoing. ESAF works the same way, for a liability problem that is growing faster than most legal teams realize.

AI liability is no longer theoretical. If your system influences behavior, you own the outcome. ESAF is what proves you had enforceable boundaries in place before anything went wrong.

SECTION 01 — CONTINUED

The Three Pillars

ESAF is built on three operational pillars that together form a complete governance layer at the interaction level — the exact point where liability is either created or prevented.

PILLAR	WHAT IT DOES — AND WHY IT MATTERS LEGALLY
1. Identity & Authority Signaling	Prevents AI from being interpreted as a licensed professional or absolute authority. Closes one of the clearest liability exposure points in enterprise AI — when a user acts on AI advice believing it came from a credentialed source. Before a claim is filed, this pillar removes the foundation of it.
2. Emotional Trigger Thresholds	Detects escalation patterns in real time — distress, dependency, emotional volatility — and triggers required interventions before harm occurs. This makes ESAF proactive rather than reactive. The system catches risk before it becomes an incident.
3. Redirection & Oversight Engine	Establishes a structured handoff to human oversight when risk thresholds are crossed. When the system flags an issue, there is a defined, documented process for what happens next. That documentation is exactly what a legal team or regulator will ask for.

Pillar 1 prevents misrepresentation. Pillar 2 catches escalation. Pillar 3 enforces the response and documents it. That end-to-end chain is what makes ESAF a governance standard rather than a feature — and what no existing framework provides at this level.

SECTION 02

Why right now is the right time to sell this

The regulatory environment has shifted significantly in the past 18 months. Your buyers are not waiting for a future problem — they are dealing with active pressure today:

EU AI ACT

Now in enforcement. Companies deploying AI in high-risk environments are legally required to have risk management systems in place. **ESAF is exactly that system.**

US LEGISLATION

AI executive orders and state legislation are creating compliance requirements that most companies have no answer for yet.

INSURANCE PREMIUMS

Enterprise AI insurance premiums are rising sharply. Carriers cannot underwrite behavioral AI risk without a standard to measure against. **ESAF fills that gap.**

MAINSTREAM AWARENESS

High-profile AI emotional dependency incidents are now in mainstream news. C-suite executives are aware and looking for solutions.

The window to establish ESAF as the recognized standard — before a competitor does — is open right now. Most governance categories are built by the first credible player to claim them.

SECTION 02 — CONTINUED

Who your buyers are — and which pillar lands first

The three-pillar structure opens three distinct entry conversations depending on who you are talking to.

WHO THEY ARE	LEAD WITH THIS PILLAR	WHY IT LANDS
Chief Compliance Officers & General Counsel	Pillar 3 — Redirection & Oversight Engine	Their primary fear is documentation. When a regulator asks "what happened and what did your system do about it," Pillar 3 is the answer. Lead with the audit trail and structured handoff process.
Healthcare AI companies with patient-facing tools	Pillar 2 — Emotional Trigger Thresholds	Vulnerable users, HIPAA exposure, one dependency incident away from catastrophe. They need proof the system catches risk before it becomes harm.
EdTech companies with AI tools for students	Pillar 1 — Identity & Authority Signaling	Biggest exposure is an AI a student treats as a trusted authority figure. Pillar 1 prevents that misrepresentation from forming. Politically immediate and easy to understand.
AI compliance platforms & potential partners	All three pillars — as a capability gap	They have distribution. They do not have this. Position the full three-pillar system as the capability layer they cannot build as fast. Partnership or OEM conversation, not a sales conversation.

SECTION 03

The go-to-market strategy

One thing to change immediately

Right now ESAF's pitch leads with the product: "a governance standard that operates as an overlay on existing AI systems." That is accurate — but it is not how buyers think. Nobody is searching for that phrase.

The pitch needs to lead with the fear buyers already feel, not the solution you have built. These three opening lines open doors:

"Your AI is creating liability you cannot see — emotional dependency, authority overreach, identity fraud. Most companies have no way to detect it, let alone stop it."

"When a regulator asks you to prove your AI behaved safely, what do you show them? ESAF is that proof."

"The EU AI Act is already in enforcement. Your competitors are not ready. This is your window to be the company that is."

SECTION 03 — CONTINUED

How to reach buyers — in order of priority

01 — LinkedIn Content

Post 2-3 times per week about AI safety, regulatory liability, and the risks of unguarded AI. Goal: own the phrase "AI interaction safety" before anyone else does. Builds inbound over time and warms up every outbound target before you reach out.

02 — Direct Outreach

Cold email and LinkedIn outreach to Chief Compliance Officers and General Counsel at companies actively deploying AI tools. Lead with the fear, not the product. Offer a 15-minute call — not a full demo. Short, urgent, specific.

03 — Conference Speaking

Apply to 5 AI governance and compliance conferences now. One 30-minute talk puts you in front of 300+ qualified buyers in a single session. The fastest way to build category authority.

04 — Analyst Briefings

Request a briefing with Gartner and Forrester analysts covering AI governance. One mention in a Gartner report is worth more than 100 cold emails. The briefing itself is free and takes one email to request.

05 — Partnership Outreach

Reach out to AI compliance platforms that already have enterprise distribution. They have the clients. You have a capability they cannot build as fast. A referral or OEM arrangement creates revenue without a long sales cycle.

SECTION 03 — CONTINUED

Start with pilots — not enterprise licenses

Asking for a large licensing commitment before any organization has experienced ESAF in a real environment is a hard sell. The faster path is a paid pilot at \$15,000 – \$25,000 for a 90-day engagement.

The client gets:

- Full assessment of their AI interaction risk
- Mapped ESAF governance framework for their environment
- Regulatory alignment report for their legal team

You get:

- Real-world case study
- Paying client relationship
- Proof of concept that unlocks enterprise licensing

"I am not asking you to adopt a full governance standard today. I am asking you to find out exactly how exposed you are — and what it would take to close that gap."

The 90-Day Roadmap

Days 1–30	Lock the positioning. Rewrite the one-page ESAF pitch around buyer fears. Build the regulatory alignment brief mapping ESAF to EU AI Act, HIPAA, and FERPA. Develop the pilot offer package. Launch LinkedIn content calendar.
Days 30–60	Start outreach. 20 direct outreach sequences to CCO and legal contacts. Submit speaker applications to 5 conferences. Send analyst briefing requests to Gartner and Forrester. Begin partnership conversations.
Days 60–90	Close the first pilot. Use the pilot process to generate the first case study. That case study becomes the anchor for every enterprise conversation that follows.

SECTION 04

How we work together

You handle the execution. I bring the strategy, the outside perspective, and the accountability at every stage. Rate: \$150/hour across all options. Choose the level of involvement that fits — you can always adjust as things progress.

The Compass Monthly Strategy Call

Monthly Strategy Call

2 hours / month

\$300 /mo

- One 60-minute strategy call per month
- 30 minutes prep — I review your progress & materials before each call
- Up to 2 async responses between calls
- Feedback on pitch decks, outreach emails, sales materials

The Co-Pilot

Biweekly Calls

4 hours / month

\$600 /mo

- Two 60-minute strategy calls per month
- One hour prep + written recap with action items after each call
- Up to 4 async responses between calls
- Review outreach sequences, partnership decks, positioning copy
- Running GTM tracker I maintain each session

SECTION 04 – CONTINUED

The War Room Weekly Strategic Partner

10 hours / month

\$1,500 /mo

- Four 60-minute calls per month — one every week
 - Month one: 3 dedicated hours to build your full GTM plan — buyer personas, positioning narrative, channel strategy, 90-day action plan, 10–15 prioritized partnership targets
- Two hours of async work per month — pitch feedback, outreach review, strategic questions
 - Pre-call prep and written recap every week
 - Access to my network: AI Builders Miami, Automation Nation, warm introductions where relevant

The GTM Sprint One-Time Intensive · Recommended

5 hours total

\$750 flat

- Two 90-minute deep-dive sessions (or one 3-hour block — your choice)
- After sessions: two hours producing a written GTM Strategy Document you can execute independently
- Document covers: priority buyer personas, repositioned pitch narrative, channel recommendations with rationale, 90-day action plan

SECTION 05

Where this lands strongest

Here is my honest read after reviewing the full framework.

STRONGEST ENTRY POINT

Healthcare AI

All three pillars are immediately relevant and buyer urgency is highest. HIPAA already creates a compliance mindset — ESAF slots in as the behavioral layer that HIPAA does not cover. Paid pilots close fastest here. The risk is visible, one incident makes national news.

HIGHEST LEVERAGE

Legal & Compliance Teams

Regardless of vertical, leading with Pillar 3 opens the most doors quickest. Legal teams are already asking "who is liable when our AI does something wrong." They have no good answer. Pillar 3 gives them one — documented, structured, enforceable.

CATEGORY MOVE

Own "AI Liability Governance"

Nobody has planted a flag on this category yet. The groups circling emotional AI safety from modeling and ethics will not get there. Every LinkedIn post, every conference talk, every analyst briefing should use those exact words consistently.

"When something goes wrong with your AI, what is your documented response? ESAF makes sure you have one." — That is not a technology pitch. It is a liability pitch. Liability skips the IT department and lands directly in the room where budget decisions are made.

SECTION 06

My recommendation

If I were in your position, I would start with the **GTM Sprint**.

At \$750 for five focused hours, you get a complete, written roadmap you can act on immediately — without any long-term commitment. It gives us the chance to work together in a low-risk way, and it gives me enough depth to give you real, specific advice rather than generic strategy.

"The framework is strong and the timing is right. But right now ESAF is positioned to explain the product, not to speak to the fear buyers already feel. My job is to help you get in front of the right people in language that makes them lean forward. Before we chase enterprise licensing, we need three things: a repositioned pitch, a clear buyer profile, and one pilot win. Once those are in place, the licensing conversations happen on your terms."

Next Steps

- 1 Reply with the option you would like to move forward with and a time to connect.
- 2 I will send a one-page service agreement and we will schedule the first session.
- 3 We start with a repositioned pitch, a clear buyer profile, and a path to the first pilot win.
