

PITCH DECK · 2026

The AI idea was never the problem.

The prompt always was. Five steps. Any idea. Any platform.

promptAnything.io | PROMPT ENGINEERING · SIMPLIFIED

Everyone has an AI idea. Most never ship. Here's why — and the fix.

— **11 REWRITES.** The average person rewrites the same prompt 11 times before giving up. [promptAnything.io](#) eliminates every one of them.

THE PROBLEM

- Prompt engineering is a hidden skill barrier
- Ideas die in endless iteration

THE SOLUTION

- 5-step guided prompt builder
- Platform asks the questions you don't know to ask

THE RESULT

- Deploy-ready prompts in one session
- Works in n8n, Make, Claude, and more

Most AI ideas die before they're built.

- The idea is clear. The prompt is not.
- Iteration without structure wastes hours
- The gap between idea and output is the prompt

The models are extraordinary. GPT-4, Claude, Gemini — they can do almost anything you ask. The problem is the ask. Nobody taught you prompt engineering. The gap between your idea and a working AI product is filled with guesswork.

11x

Average rewrites before a user abandons their AI idea

promptAnything.io builds your prompt for you.

- Start with a simple idea
- The platform asks the right questions
- One click generates a deployment-ready prompt

Not a prompt library. Not a template engine. An interactive prompt architect — walks you through a structured conversation, then delivers a finished prompt you can take anywhere.

BEFORE VS. AFTER

WITHOUT PROMPTANYTHING

Blank page. 11 rewrites. Hours spent guessing at structure. Most ideas stall here.

WITH PROMPTANYTHING

5 guided steps. One session. A structured, deploy-ready prompt with no guesswork.

Five steps. Every idea. Every platform.

01

IDEA

Start with a simple idea —
one sentence is enough

02

PATH

Choose agent workflow or
Claude skill

03

REFINE

Platform asks and
answers the right
questions

04

GENERATE

One click builds the full
structured framework

05

DEPLOY

Paste into any tool. Fully
portable output.

You already have everything step one needs.

- One sentence minimum
- No technical framing required
- Any domain: business, content, automation

"I want an AI that screens my inbound leads before I get on a call with them."

That's all step one needs.

Two paths. One decision. No wrong answer.

- Agent workflow automation: multi-step, tool-connected
- Claude skill: single-purpose, conversation-embedded
- The choice shapes the entire prompt structure

Most people never think about this distinction before writing. That single decision changes everything about the prompt that gets built.

AGENT WORKFLOW

n8n · Make · Zapier · Custom agents

Best when: you need multi-step automation, tool connections, or scheduled triggers. The prompt controls the agent logic end-to-end.

CLAUDE SKILL

Repeatable · Conversation-embedded · Single-purpose

Best when: you want consistent, reusable behavior in Claude conversations. The prompt defines the skill trigger and output format.

The platform asks what you forgot to think about.

- Relevant questions auto-generated to your idea
- Fills in context, constraints, and logic gaps
- No prompt engineering knowledge required

It doesn't just ask — it answers alongside you. Compressed into a guided conversation anyone can complete.

Who is the audience for this output?

What format should the AI use?

What should it never do?

What's the success condition?

One click builds the full structured framework.

- Complete prompt generated from your refined idea
- Structured format — not freeform text
- No editing required — deploy-ready on output

A framework with context blocks, instruction sets, constraints, and output format specs. Everything a prompt needs to work consistently.

Generate
Prompt

[CONTEXT] You are a...
[INSTRUCTION] When given...
[CONSTRAINTS] Never...
[OUTPUT FORMAT] Return as...

The prompt works in any tool you already use.

- Drop into n8n, Make, Zapier, or any agent
- Use in Claude skills, web apps, custom workflows
- One prompt. Total portability.

You're not locked into our platform. You're building assets you own. Every new platform becomes another deployment target.

n8n

Paste prompt into AI node → done

MAKE

Drop into scenario module

CLAUDE SKILLS

Load as a reusable conversation skill

ANY MODEL

ChatGPT, Gemini, custom API

WEB APPS · API PIPELINES · ZAPIER · CUSTOM AGENTS

Your prompt is a portable asset. One session, infinite deployment targets.

Built for builders who are not yet technical.

FOUNDERS

AI is on the roadmap. Building it keeps hitting a wall at the prompt layer. promptAnything.io removes that wall.

OPERATORS

Five automation ideas, three months of Zapier experience. Knows the tools but not how to structure a prompt that controls the output.

AGENCIES

Delivering AI solutions to clients. Cannot spend eight hours per project on prompts through trial and error.

Prompt engineering is the new interface layer.

- Billions in AI spend failing at the prompt layer
- Non-technical builders are the fastest-growing AI user segment
- Platform-agnostic tools compound across every AI deployment

The model can do anything — the prompt is the constraint. Every new platform is a new deployment target. The market grows as AI grows.

73M+ NON-TECHNICAL BUILDERS
actively using automation tools today — all hitting the prompt wall

\$390B AI TOOLING MARKET BY 2028
Prompt infrastructure is the fastest-growing layer

11× AVG. REWRITES BEFORE ABANDONMENT
Every one of them is a conversion we capture

Non-technical builders are running out of excuses not to build.

- Models are capable. Prompts are the last barrier.
- Workflow tools democratized automation — this democratizes prompts
- The window for platform-agnostic tooling is open

1 Models got good enough. The capability ceiling is gone for most use cases.

2 Workflow platforms matured. Millions of non-technical builders already use automation tools.

3 Nobody solved the prompt layer for those people — until now.

AGENT WORKFLOW AUTOMATION

From idea to deployed lead qualifier in one session.

THE IDEA

"Screen my inbound leads before I get on a call with them."

THE RESULT

- Deployed in n8n same day
- Connected to intake form + CRM
- Zero iterations after generate

TIME TO DEPLOY

15 min

idea to running workflow

CLAUDE SKILL

A client-facing content skill built in one afternoon.

THE IDEA

"Turn any meeting transcript into a follow-up email in my client's brand voice."

THE RESULT

- Loaded into Claude skill system
- Consistent tone every invocation
- Client-ready output, no editing

TIME TO DEPLOY

15 min

idea to repeatable skill

You already have the idea. You know where the gap is.

- The prompt is the only thing between you and shipping
- You now have a five-step system to close that gap
- One session. One prompt. Everything changes.

The one AI idea you've been sitting on — half-built in your head for weeks — is one session away from being real.

WHAT YOU WALK AWAY WITH

- A structured, deploy-ready prompt
- Zero iterations required after generate
- Works in any tool you already use
- Repeatable — run again on any new idea

No account needed to start.

[promptAnything.io](https://promptanything.io) → open → build

START TODAY

Try the workflow on your idea today.

1. Go to promptAnything.io

Choose your path. Run the workflow.

2. Walk out with a deployment-ready prompt.

One session. No guesswork. No iterations.
